

GRID X

Permeable Paving Solutions

Sustainable Innovation, Outstanding Versatility

Stay grounded with GridX - the eco-friendly system of permeable paving grids made from 100% post-consumer recycled plastic.

As a natural alternative to asphalt or concrete, GridX is perfect for parking lots, driveways and animal paddocks. The porous grids stabilize the soil - eliminating potholes, ruts and mud - and allow water to permeate the ground, creating a flexible and durable surface for vehicles and pedestrians.

A Green Solution

The porous GridX web structure supports Low Impact Development by allowing rain and stormwater to saturate the ground evenly, improving earth retention, slope protection and groundwater recharge.

Lock into Strength

The strong interlocking grid can be filled with soil, gravel, grass, or paving stones to improve grid strength and withstand heavy traffic, including construction equipment, snowplows, lawnmowers, trucks and other utility vehicles.

A Natural Fit

Manufactured from 100% post-consumer recycled (PCR) plastic, GridX is an environmentally-friendly resin product that leaves behind a significantly smaller ecological footprint than other paving methods.

Leading-Edge Design

GridX's matrix design combines rigid squares for maximum load-bearing durability with curved, torsional flex fins to handle thermal expansion and contraction as well as weight fluctuations.

COMMERCIAL

RESIDENTIAL

INDUSTRIAL

AGRICULTURAL

EQUESTRIAN

GridX offers exceptional versatility for a wide range of environmentally-friendly paving applications.

Roads and Driveways ▶

GridX is ideal for cost-effective and fast construction of access routes for industrial and commercial buildings, fire lanes, emergency routes and remote areas.

◀ Parking Lots

Break new ground with a permeable parking lot that is easy to install and maintain. Optional 12" x 12" porous paver stones can be set into the Double Stone Parking Grid for 8 foot parking space line markers.

Animal Paddocks ▶

Solve the problem of messy farm yards, paddocks and equestrian arenas with a reliable, well-drained surface. GridX panels drain evenly and hold soil in place, creating a safe and clean environment for you and your animals - without the worry of falls from muddy, slippery surfaces.

Easy Installation

GridX is quick to install and easy to maintain. With the site prepared as per engineer's guidelines, the 1' x 2' grids simply lock into place. Add gravel to the interlocking panels for an even stronger grid platform or plant grass for a natural look.

Cost-Effective Alternative

GridX solves the challenges of asphalt and concrete roadways: poor drainage, ongoing maintenance, potholes, and cracks. With less equipment required for installation and drainage, GridX offers an excellent alternative to traditional paving methods, with low to zero maintenance.
